

## Identification / Optimization

So you wanna fit model's parameters but you don't know how to ?

Your optimization procedure gave you some outputs but you have no idea wether they are good or not ?

Then this section is for you !

Here will be listed a few links to tutorials / tips and tricks / jupyter notebook to learn how to fit parameters / minimize a function, which algorithms to use, how to play with their parameters and how to generate indicators to be sur that your solution is good !

Please contribute 

### Identification algorithm

### Solution quality

- Use indentifiability indicators to ensure that your solution is unique and stable : [Playing with I](#)
